

Matrix transpose with unrolling

Grid size is same as matrix
size

$ix = \text{blockDim.x} * \text{blockIdx.x} * 4 + \text{threadIdx.x};$

For threads in thread block 1

$$\begin{aligned} \text{offset} &= 32 * 0 \\ &* 4 \\ &= 0 \end{aligned}$$

For threads in thread block 2

$$\begin{aligned} \text{offset} &= 32 * 1 \\ &* 4 \\ &= 128 \end{aligned}$$

```
transpose[ix * ny + iy] = mat[iy * nx + ix];
```

to

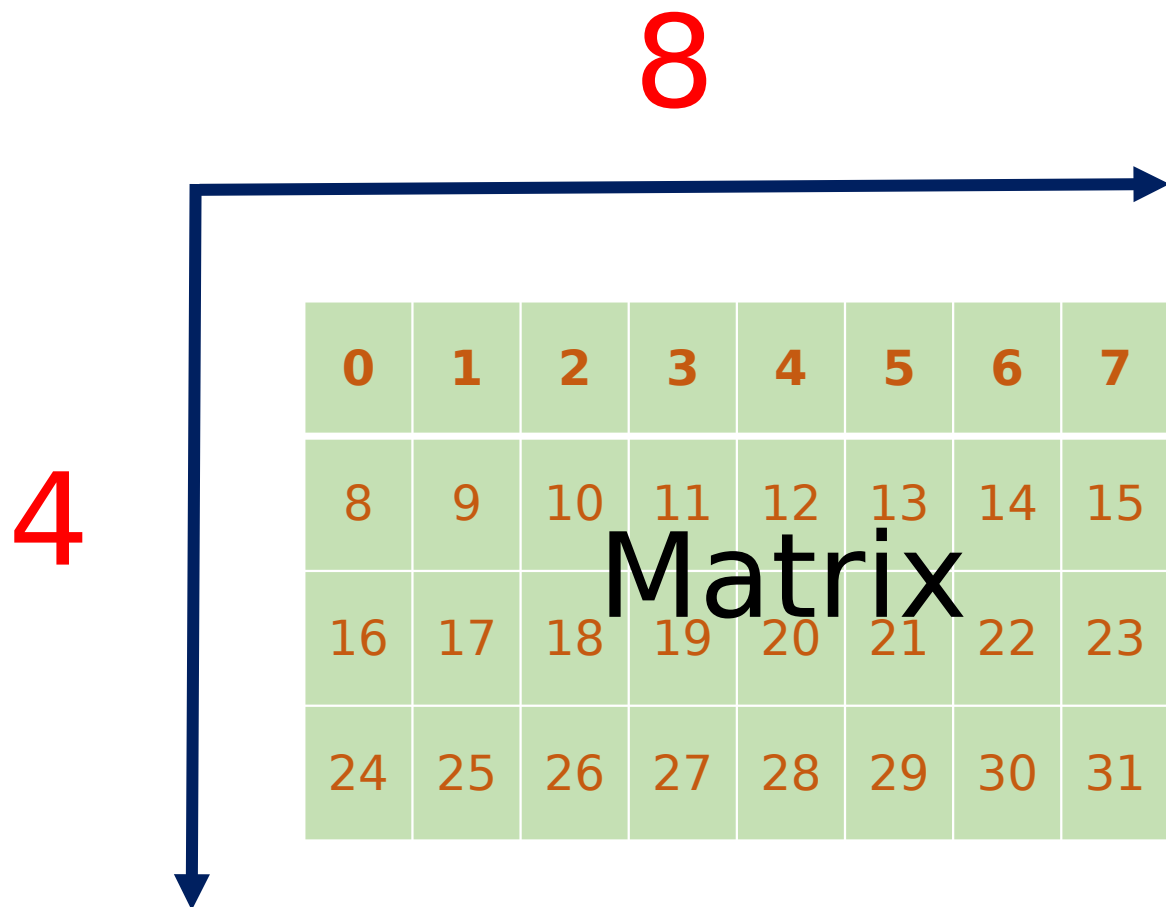

```
trs[(ix * ny + iy) + ny * 0 * blockDim.x] = mat[(iy * nx + ix) + 0 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 1 * blockDim.x] = mat[(iy * nx + ix) + 1 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 2 * blockDim.x] = mat[(iy * nx + ix) + 2 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 3 * blockDim.x] = mat[(iy * nx + ix) + 3 *  
blockDim.x]
```

ti

```
trs[(ix * ny + iy) + ny * 0 * blockDim.x] = mat[(iy * nx + ix) + 0 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 1 * blockDim.x] = mat[(iy * nx + ix) + 1 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 2 * blockDim.x] = mat[(iy * nx + ix) + 2 *  
blockDim.x]  
trs[(ix * ny + iy) + ny * 3 * blockDim.x] = mat[(iy * nx + ix) + 3 *  
blockDim.x]
```

Grid

- 4 by 8 matrix
- Elements initialized in 0 to 31 in row major format
- Perform the transpose using grid which has 1 thread block in x dimension and 2 thread blocks in y dimension each block having 2 threads in x dimension and 2 threads in y dimension.
